Vera C. Rubin Observatory Data Management

## Vera C. Rubin Observatory Network Verification Document

Jeff Kantor

LDM-732

Latest Revision: 2020-10-12

Draft Revision NOT YET Approved – This Rubin Observatory document has been approved as a Content-Controlled Document by the Rubin Observatory DM Change Control Board. If this document is changed or superseded, the new document will retain the Handle designation shown above. The control is on the most recent digital document with this Handle in the Rubin Observatory digital archive and not printed versions. Additional information may be found in the corresponding DM RFC. – Draft Revision NOT YET Approved

## Abstract

The Vera C Rubin Observatory Network Verification Document (VNVD) and associated JIRA V&V Project define the flow-down of specifications from higher level documents to the LSST Observatory Network (as defined in LSE-78 LSST Observatory Network), and the methods and resources that will be used to verify that the networks have met the specifications satisfactory for accepting the Summit Network into DM Subsystem Integration Test (DMSSIT) and LSST System Integration Test (SIT)

## Vera C. Rubin Observatory Network Verification Document

## **1** Introduction

## 1.1 Scope

This plan governs only tests of the network infrastructure, not the applications and services that use the network. To be specific, this plan governs tests of the network only up to ISO OSI Layer https://en.wikipedia.org/wiki/OSI\_model.

As such, all of the tests governed by this plan and defined in the LSST Verification and Validation JIRA Project (LVV) are defined as Lower Level (LL) in the System Engineering test hierarchy. LL corresponds to Data Management Subsystem Integration. Where appropriate, additional comments regarding Same Level (SL) which corresponds to LSST System Integration, and Higher Level (HL) which corresponds to LSST Commissioning, are called out in the Verification Elements.

Note that significant testing of the networks occurs prior to subsystem and system integration, i.e. prior to verification, as documented in document-14789 LSST LHN End-to-End Plan and associated test documentation (see Collection-3758).

Finally, note that one significant network, the Summit Network, is not a DM deliverable and as such is not contained within this plan. As Telescope and Site deliverable, the Summit Network is covered by the Telescope and Site V&V plans.

## 1.2 Specification Flow-down

## 1.2.1 Data Management Subsystem Requirements Flow-down

The Data Management Subsystem Requirements (LSE-61, aka DMSR) drive the LSST Observatory Network Design for all segments except the Summit Network (see above). The DMSR sections that directly drive the VNVD are listed here for convenience. These DMSR sections contain traceable network requirements as documented in the LSST V&V JIRA Project (LVV) Verification Elements:

- 1.2.1 Nightly Data Accessible Within 24 hrs
- 2.6.3 Transient Alert Distribution
- 2.6.8 Solar System Objects Available within 24 hours
- 2.8.1 Timely Publication of Level 2 Data Releases
- 4.4 Summit to Base
- 4.6 Base to Archive
- 4.8 Archive to Data Access Center

## 1.2.2 Observatory System Specifications Flow-down

Note that the Observatory System Specifications (LSE-30, aka OSS) also include general requirements on security, disaster recovery, physical environment (including seismic activity), and shipping which are flowed down to the subsystems, and while they apply to all subsystems, including the networks, they will be tested and verified in the Telescope and Data Management Subsystem Integration Tests and in the LSST Commissioning Phase, as part of the LSST System Integration Test. Those requirements are excluded from this specification and the associated verification matrix, as they will be addressed in the applicable plans.

## **1.3 LSST Verification and Validation JIRA Project (LVV)**

The LSST Verification and Validation JIRA Project lists the specifications within or derived from, and traceable to, the DMSR specifications, in Verification Elements that also specify the methods to be used to verify, the responsible parties, and additional notes regarding verification, per the LSE-160 LSST Verification and Validation Process. The Verification Elements then have one or more Test Cases associated with them that describe the implementation of the verification activities in terms of specific tests to be executed. Those Test Cases are then scheduled via Test Plans and Campaigns, and executed with results reported in Test Cycles/

## **1.4** Verification and Validation Schedule and Resources

The schedule and resources required for network verification are defined in the LSST Project Management Control System (PMCS). They are covered by the final integration test activities

in the WBS elements 02C.08.03 Long-Haul Networks. In each Verification Element, a cross-reference to the ID of the appropriate predecessor PMCS activities is provided in the preconditions field.

## **1.5 Applicable Documents**

- LSE-61 LSST DM Subsystem Requirements
- LSE-78 LSST Observatory Network Design
- LSE-160 Verification and Validation Process

## 2 DM Network Verification Elements

The following is the list of verification elements defined in the context of the Network component of the DM subsystem.

## 2.1 [LVV-71] DMS-REQ-0168-V-01: Summit Facility Data Communications

| Jira Link | Assignee                | Status      | Priority | Test Cases |
|-----------|-------------------------|-------------|----------|------------|
| LVV-71    | Gregory Dubois-Felsmann | Not Covered | 1a       | LVV-T1097  |

## Verification Element Description:

Verify that:

- Summit Base Network has been properly implemented in Summit and Base facilities
- Summit Base Network is properly integrated with Summit Control Network and DAQ/-Camera Data Backbone

Verify that OCS/DMCS triggers read-out from DAQ and queries EFD. verify that data from EFD and camera are accepted and transferred to the Summit DWDM. Requirement does not include data transfer to base (LVV-73) or from base to archive center (LVV-81, LVV-82, LVV-83).

LDM-732

Latest Revision 2020-10-12

### Verification Element Description:

This requirement must be tested in sequence and collect performance metrics (both DAQ and Control sides unless noted):

- 1. ISO OSI Layer 1 Physical (fibers with test data from OTDR, AURA does test)
- 2. ISO OSI Layer 2 Data Link (DWDM equipment, line cards, with test data from multichannel/lightwave/channel analyzer, Installer does test, AURA certify)
- 3. ISO Layer 3 minimal (DWDM with 2 x 10 Gbps ethernet port client cards with test data from 4 windows test boxes, 2 on each side, Installer does test, AURA certify, can repeat as part of #4 with DAQ)
- 4. ISO Layer 3 full (22 x 10 Gbps ethernet ports on DAQ side with test data from DAQ test stand, AURA, Camera DAQ team do test). Transfer data between summit and base over uninterrupted 1 day period. Â Demonstrate transfer of data at or exceeding rates specified in LDM-142.

|                              | Upstream Requirements  |  |  |
|------------------------------|--|--|--|
| Requirement ID               | DMS-REQ-0171   |  |  |
| Requirement De-<br>scription | <b>Specification:</b> The DMS shall provide communications infrastructure between the Summit Facility and the Base Facility sufficient to carry scientific data and associated metadata for each image in no more than time <b>summToBaseMaxTransferTime</b> . |  |  |

#### **Objective:**

Verify ISO Layer 3 full (22 x 10 Gbps ethernet ports on DAQ side with test data from DAQ test stand, AURA, Camera DAQ team do test). Demonstrate transfer of data at or exceeding rates specified in LDM-142.

## 2.3 [LVV-74] DMS-REQ-0172-V-01: Summit to Base Network Availability

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-74    | Robert Gruendl | Not Covered | 1a       | LVV-T185   |

### Verification Element Description:

This requirement needs the network link to be active for a calculated amount of time (at least 1 week) without failure. Will require extrapolating from test and historical data as failures are rare. Monthly operating statistics will be acquired during commissioning. Demonstrate transfer of data at or exceeding rates specified in LDM-142, verify achieved average and peak throughput and latency.

| Upstream Requirements   |   |  |  |  |  |
|---|---|--|--|--|--|
| Requirement ID  | DMS-REQ-0172  |  |  |  |  |
| Requirement De-   | <b>Specification:</b> The Summit to Base communications shall be highly available, with Mean        |  |  |  |  |
| scription Time Between Failures (MTBF) > <b>summToBaseNetMTBF</b> . |   |  |  |  |  |
| Requirement Pa-   | quirement Pa- <b>summToBaseNetMTBF = 90[day]</b> Mean time between failures, measured over a 1-yr p |  |  |  |  |
| rameters  | riod.   |  |  |  |  |
| Requirement Prior-  | 1b  |  |  |  |  |
| ity   |   |  |  |  |  |
|   | OSS-REQ-0373 Unscheduled Downtime Subsystem Allocations   |  |  |  |  |
| Upper Level Re-<br>quirement  | DMS-REQ-0161 Optimization of Cost, Reliability and Availability in Order                            |  |  |  |  |

## 2.3.1 Test Cases Summary

| LVV-T185    | Verify implementation of Summit to Base Network Availability |         |                       |                   |  |
|-------------|--|---------|-----------------------|-------------------|--|
| Owner       | Status   | Version | <b>Critical Event</b> | Verification Type |  |
| Jeff Kantor | Draft  | 1       | false                 | Inspection        |  |

#### Objective:

Verify the availability of Summit to Base Network by demonstrating that the mean time between failures is less than summTo-BaseNetMTBF (90 days) over 1 year.

## 2.4 [LVV-75] DMS-REQ-0173-V-01: Summit to Base Network Reliability

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-75    | Robert Gruendl | Not Covered | 1a       | LVV-T186   |

### Verification Element Description:

Disconnect, reconnect and recover transfer of data between summit and base. After disconnecting fiber at an intermediate location between summit and base, demonstrate reconnection and recovery to transfer of data at or exceeding rates specified in LDM-142 within MTTR specification. Â Network operator will provide MTTR data on links during commissioning and operations.

|  | Upstream Requirements   |  |  |  |
|--|---|--|--|--|
| Requirement ID   | DMS-REQ-0173  |  |  |  |
| Requirement De-  | Specification: The Summit to Base communications shall be highly reliable, with Mean      |  |  |  |
| scription Time to Repair (MTTR) < <b>summToBaseNetMTTR</b> . |   |  |  |  |
| Requirement Pa-  | <pre>summToBaseNetMTTR = 24[hour] Mean time to repair, measured over a 1-yr period.</pre> |  |  |  |
| rameters   |   |  |  |  |
| Requirement Prior-   | 1b  |  |  |  |
| ity  |   |  |  |  |
|  | OSS-REQ-0373 Unscheduled Downtime Subsystem Allocations                                   |  |  |  |
| Upper Level Re-<br>quirement                                 | DMS-REQ-0161 Optimization of Cost, Reliability and Availability in Order                  |  |  |  |

## 2.4.1 Test Cases Summary

| LVV-T186    | Verify implementation of Summit to Base Network Reliability |         |                       |                   |  |
|-------------|---|---------|-----------------------|-------------------|--|
| Owner       | Status  | Version | <b>Critical Event</b> | Verification Type |  |
| Jeff Kantor | Draft   | 1       | false                 | Demonstration     |  |

#### **Objective:**

Verify the reliability of the summit to base network by demonstrating reconnection and recovery to transfer of data at or exceeding rates specified in LDM-142 following a cut in network connection, within MTTR specification. The network operator will provide MTTR data on links during commissioning and operations.

## 2.5 [LVV-76] DMS-REQ-0174-V-01: Summit to Base Network Secondary Link

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-76    | Robert Gruendl | Not Covered | 1a       | LVV-T187   |

### Verification Element Description:

This requirement is verified by demonstrating use of a secondary transfer method (redundant fiber network, microwave link, or transportable medium) between Summit and Base capable of transferring 1 night of raw data (nCalibExpDay + nRawExpNightMax = 450 + 2800 = 3250 exposures) within summToBaseNet2TransMax (72 hours).

|                    | Upstream Requirements   |  |  |
|--------------------|---|--|--|
| Requirement ID     | DMS-REQ-0174  |  |  |
| Requirement De-    |   |  |  |
| Requirement Pa-    | <b>summToBaseNet2TransMax = 72[hour]</b> Maximum time to transfer one night of data via the network secondary link. |  |  |
| Requirement Prior- | 1b  |  |  |
|                    | DMS-REQ-0173 Summit to Base Network Reliability   |  |  |
| Upper Level Re-    | OSS-REQ-0049 Degraded Operational States  |  |  |
| quirement          | DMS-REQ-0172 Summit to Base Network Availability  |  |  |

## 2.5.1 Test Cases Summary

| LVV-T187    | Verify implementation of Summit to Base Network Secondary Link |         |                       |                   |  |
|-------------|--|---------|-----------------------|-------------------|--|
| Owner       | Status   | Version | <b>Critical Event</b> | Verification Type |  |
| Jeff Kantor | Draft  | 1       | false                 | Test              |  |

#### Objective:

Verify automated fail-over from primary to secondary equipment in Rubin Observatory DWDM on simulated failure of primary. Verify bandwidth sufficiency on secondary. Verify automated recovery to primary equipment on simulated restoration of primary. Repeat for failure of Rubin Observatory fiber and fail-over to AURA fiber and DWDM. Demonstrate use of secondary in "catch-up" mode.

# 2.6 [LVV-77] DMS-REQ-0175-V-01: Summit to Base Network Ownership and Operation

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-77    | Robert Gruendl | Not Covered | 1a       | LVV-T188   |

## Verification Element Description:

This requirement is verified by inspecting construction and operations contracts and Indefeasible Rights to Use (IRUs).

| Upstream Requirements  |  |  |  |  |  |
|--|--|--|--|--|--|
| Requirement ID   | DMS-REQ-0175   |  |  |  |  |
| Requirement De- Specification: The Summit to Base communications link shall be owned and operation |  |  |  |  |  |
| scription LSST and/or the operations entity to ensure responsiveness of support.                   |  |  |  |  |  |
| Requirement Prior- 1b  |  |  |  |  |  |

| Owner       | Status Version Critical Event Verification T     |   |       |      |  |
| Jeff Kantor | Draft  | 1 | false | Test |  |

#### Objective:

Verify that the data acquired by a DAQ can be transferred within the required time, i.e. verify that link is capable of transferring image for prompt processing in oArchiveMaxTransferTime = 5[second], i.e. at or exceeding rates specified in LDM-142.

## 2.8 [LVV-82] DMS-REQ-0181-V-01: Base to Archive Network Availability

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-82    | Robert Gruendl | Not Covered | 1a       | LVV-T194   |

### Verification Element Description:

This requirement is verified by transferring data between base and archive over uninterrupted 1 week period, modeling to extrapolate to an annual failure rate, and verifying that is within the requirement.

|                    | Upstream Requirements  |
|--------------------|--|
| Requirement ID     | DMS-REQ-0181   |
| Requirement De-    | Specification: The Base to Archive communications shall be highly available, with MTBF |
| scription          | > baseToArchNetMTBF.   |
| Requirement Pa-    | baseToArchNetMTBF = 180[day] Mean time between failures, measured over a 1-yr pe-      |
| rameters           | riod.  |
| Requirement Prior- | 1b   |
| ity                |  |
|                    | OSS-REQ-0053 Base-Archive Connectivity Loss  |

| quirement             | OSS-REQ-0049 Degraded Operational States  |  |  |  |

## 2.10.1 Test Cases Summary

| LVV-T196    | Verify implementation of Base to Archive Network Secondary Link |         |                       |                   |  |
|-------------|---|---------|-----------------------|-------------------|--|
| Owner       | Status  | Version | <b>Critical Event</b> | Verification Type |  |
| Jeff Kantor | Draft   | 1       | false                 | Test              |  |

#### Objective:

Verify Base to Archive Network Secondary Link failover and capacity, and subsequent recovery primary. Demonstrate the use of the secondary path in "catch-up" mode.

## 2.11 [LVV-88] DMS-REQ-0188-V-01: Archive to Data Access Center Network

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-88    | Robert Gruendl | Not Covered | 1a       | LVV-T200   |

## Verification Element Description:

This requirement is verified by transferring data between archive and both DACs over uninterrupted 1 day period, analyzing the network performance, and verifying that data can be transferred within the required time.

|                    | Upstream Requirements  |
|--------------------|--|
| Requirement ID     | DMS-REQ-0188   |
| Requirement De-    | Specification: The DMS shall provide communications infrastructure between the             |
| scription          | Archive Center and Data Access Centers sufficient to carry scientific data and associated  |
|                    | metadata in support of community and EPO access. Aggregate bandwidth for data trans-       |
|                    | fers from the Archive Center to Data Centers shall be at least <b>archToDacBandwidth</b> . |
| Requirement Pa-    | archToDacBandwidth = 10000[megabit per second] Aggregate bandwidth capacity for            |
| rameters           | data transfers between the Archive and Data Access Centers.                                |
| Requirement Prior- | 1b   |
| ity                |  |
| Upper Level Re-    | OSS-REQ-0004 The Archive Facility  |
| quirement          |  |

## 2.11.1 Test Cases Summary

| LVV-T200    | Verify implementation of Archive to Data Access Center Network |         |                       |                   |  |
|-------------|--|---------|-----------------------|-------------------|--|
| Owner       | Status   | Version | <b>Critical Event</b> | Verification Type |  |
| Jeff Kantor | Draft  | 1       | false                 | Test              |  |

#### **Objective:**

Verify archiving of data to Data Access Center Network at or exceeding rates specified in LDM-142, i.e at archToDacBandwidth

= 10000[megabit per second].

## 2.12 [LVV-89] DMS-REQ-0189-V-01: Archive to Data Access Center Network Availability

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-89    | Robert Gruendl | Not Covered | 1a       | LVV-T201   |

## Verification Element Description:

This requirement needs the network link to be active for a calculated amount of time (at least 1 week) without failure. This will require modeling as failures are rare, so an annual MTBF will be estimated from test results.

|                    | Upstream Requirements  |
|--------------------|--|
| Requirement ID     | DMS-REQ-0189   |
| Requirement De-    | Specification: The Archive to Data Access Center communications shall be highly avail- |
| scription          | able, with MTBF > archToDacNetMTBF.  |
| Requirement Pa-    | archToDacNetMTBF = 180[day] Mean Time Between Failures for data service between        |
| rameters           | Archive and DACs, averaged over a one-year period.                                     |
| Requirement Prior- | 1b   |
| ity                |  |
| Upper Level Re-    | DMS-REQ-0161 Optimization of Cost, Reliability and Availability in Order               |
| quirement          |  |

## 2.12.1 Test Cases Summary

| LVV-T201    | Verify implementation of Archive to Data Access Center Network Availability |         |                       |                   |  |
|-------------|---|---------|-----------------------|-------------------|--|
| Owner       | Status  | Version | <b>Critical Event</b> | Verification Type |  |
| Jeff Kantor | Draft   | 1       | false                 | Test              |  |

#### Objective:

Verify availability of archiving to Data Access Center Network using test and historical data of or exceeding archToDacNetMTBF= 180[day].

## 2.13 [LVV-90] DMS-REQ-0190-V-01: Archive to Data Access Center Network Reliability

| Jira Link | Assignee       | Status      | Priority | Test Cases |
|-----------|----------------|-------------|----------|------------|
| LVV-90    | Robert Gruendl | Not Covered | 1a       | LVV-T202   |

## Verification Element Description:

This requirement is verified by reconnecting and recovering transfer of data between archive and DACs, after disconnecting fiber at an intermediate location between archive and DACs.

| Upstream Requirements |  |  |  |  |
|-----------------------|--|--|--|--|
| Requirement ID        | DMS-REQ-0190   |  |  |  |
| Requirement De-       | Specification: The Archive to Data Access Center communications shall be highly reliable |  |  |  |
| scription             | with MTTR < archToDacNetMTTR.  |  |  |  |
| Requirement Pa-       | archToDacNetMTTR = 48[hour] Mean time to repair, measured over a 1-yr period.            |  |  |  |
| rameters              |  |  |  |  |

## C Acronyms

| Acronym | Description   |  |  |  |
|---------|---|--|--|--|
|         |   |  |  |  |
| BDC     | Base Data Center  |  |  |  |
| BERT    | Bit Error Rate Tester   |  |  |  |
| CCB     | Change Control Board  |  |  |  |
| CCS     | Camera Control System   |  |  |  |
| CISS    | Computer Infrastructure Services South (part of the former NOAO Cerro   |  |  |  |
|         | Tololo Inter-american Observatory (CTIO), now merged into NSF'S OIR Lab |  |  |  |
|         | Central Operating Services)   |  |  |  |
| CTIO    | Cerro Tololo Inter-American Observatory                                 |  |  |  |
| DAC     | Data Access Center  |  |  |  |
| DAQ     | Data Acquisition System   |  |  |  |
| DM      | Data Management   |  |  |  |
| DMCS    | Data Management Control System  |  |  |  |
| DMS     | Data Management Subsystem   |  |  |  |
| DMS-REQ | Data Management top level requirements (LSE-61)                         |  |  |  |
| DMSR    | DM System Requirements; LSE-61  |  |  |  |
| DMSSIT  | DM Subsystem Integration Test   |  |  |  |
| DMTR    | DM Test (Plan and) Report   |  |  |  |
| DTN     | Data Transfer Node  |  |  |  |
| DWDM    | Dense Wave Division Multiplex   |  |  |  |
| Db      | Decibel   |  |  |  |
| EFD     | Engineering and Facility Database                                       |  |  |  |
| EPO     | Education and Public Outreach   |  |  |  |
| FIU     | Florida International University  |  |  |  |
| HL      | Higher Level  |  |  |  |
| IP      | Internet Protocol   |  |  |  |
| IRU     | indefinable right to use  |  |  |  |
| ISO     | International Standards Organization                                    |  |  |  |
| IT      | Information Technology  |  |  |  |
| LAN     | Local Area Network  |  |  |  |
| LATISS  | LSST Atmospheric Transmission Imager and Slitless Spectrograph          |  |  |  |
| LDF     | LSST Data Facility  |  |  |  |
